

Air-operated Submersible Pump

Description

CLEANING & ENGINEERED EQUIPMENT

Product Code: 580002

IDEAL FOR DRAINING CARGO HOLDS DURING AND AFTER WASHING PROCEDURE, EMPTYING BALLAST TANKS, DEWATERING, SUMP DRAINAGE AND GENERAL USE

Our **Air-Operated Submersible Pumps** deliver powerful, efficient pumping for a wide range of liquids, even in challenging environments. Designed for durability and easy operation, these pumps provide reliable performance in dewatering, waste removal, and other marine and industrial applications. Ideal for handling tough jobs, they ensure minimal downtime and maximum efficiency.

They ensure maximum drainage under the harshest conditions and in hazardous or restricted areas. The pumps run completely on compressed air, needing no electrical supply. Although the pumps contain an intake filter, if they become blocked with debris, they will simply run dry, without any pump damage.

[Electric Submersible Pump](#) also available.

CHARACTERISTICS

- Ensures maximum drainage
- Governor controlled motor for extended pump life

- Compact air operated design for use in hazardous and restricted areas
- Robust design for use in harsh environments
- Use for:
 - Dewatering
 - Sump drainage
 - Emptying ballast tanks in marine vessels
 - Draining cargo holds during and after washing procedure
 - General use
