

## Fuel Oil and Lube Oil Test Kits

### Description

## Test Kits for rapid on-site oil analysis

New Age Chemicals provides a full range of Test Kits for rapid on-site oil analysis. These kits feature user-friendly devices to measure parameters like water content in fuel or lube oil. Additional factors such as alkalinity reserve, density, and salt contamination can also be directly assessed. The portable Fuel and Lube Oil Test Cabinet, which is easy to set up, provides a comprehensive suite of tests for evaluating oil condition. This cabinet includes an electronic combined test device for determining density and viscosity values. [Send us an email](#) for a quote on:
