

TCCA Tablets (Trichloroisocyanuric Acid)

Description

WATER TREATMENT

Product Code: 390001

POOL AND SPAS DISINFECTION TABLETS

- Cost effective and stable source of chlorine
- Easy to handle, ship, store and apply. Save expensive cost of dosing equipment
- No white turbidity (as in case of bleaching powder)
- Long duration of sterilizing effect

APPLICATION AREAS PROBLEMS SOLVED

Swimming pools	Bactericidal action
Spas	Disinfection
	Sterilization
	Bleaching

DESCRIPTION

Thanks to their characteristics, **TCCA Tablets** treat swimming pool water, since they have technological improvements that guarantee the well-being and safety of swimming pool users. They contain Trichloroisocyanuric acid 99.5%, which equals to active available chlorine 90%. **TCCA Tablets** disinfect the pool water and repel insects and are manufactured in a fully integrated production process, from basic raw materials (chlorine and caustic soda).

APPLICATION

TCCA Tablets have various effects including killing algae, deodorant, and water purification as well as bleaching. They have stronger and better bactericidal and bleaching effect than sodium dichloroisocyanurate and thus being widely used in the sterilization treatment, disinfection of swimming pools and spas, treatment of industrial wastewater and sewage and sterilization after man-made disaster.

USE AND DOSING

Swimming pool disinfection: calculate the usage according to $2-3\text{g/m}^3$; take effect for 30-60 minutes.

Public places and ground disinfection: use 1500-3000-fold diluted water solution for spraying and wiping for 30 minutes. In infectious disease epidemic era, use 150-200-fold aqueous diluted water solution for spray disinfection.

Disinfection of bathroom and toilet scrub; use 300-fold diluted solution for reaction of 30 minutes.

PRODUCT PROPERTIES

Effective content of chlorine: $\geq 90\%$

Content of water: $\leq 0.5\%$

PH value of 1% solution: 3.0 ± 0.3
